

MERP System Architecture

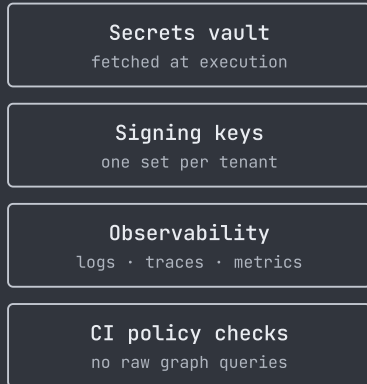

|MERP

PIL as floor · six components · products never call each other

CROSS-CUTTING

The shape of this diagram is the argument:

AXO and QUILL are not joined by a line. Neither is any other pair of products. They cooperate by leaving findings, change records and evidence in the stores, and every one of those writes passes the gate and lands in the ledger.

Add an eighth product and no existing product changes.

STILL UNSPECIFIED – the capability catalogue

How does AXO know which of QUILL's findings it can act on? Nothing in any document says. Proposed: AXO registers what it can do; QUILL names an intent from the same list. Belongs in PIL.

LEGEND

-  a service
-  things that belong together
-  a store or a queue
-  the two that everything turns o
